

Fully-Managed, AIOps-Enabled Networking

Achieve maximum uptime and performance with self-healing networks back by proactive AI monitoring.

REACTIVE NETWORKING IS HOLDING YOU BACK

Today's digital-first businesses can't afford network instability. Many organizations rely on outdated, reactive network infrastructure that causes delays in issue resolution, overloads IT teams, and creates risk.

AIOps intelligence works smarter—so you don't have to work harder. And with “six nine” network uptime, your team can rely on near-zero unplanned disruption.

Simplify network management with AIOps

- Proactive monitoring, management, and handling of network events
- Predictive maintenance and disaster recovery that ensures continuity
- Automated resource allocation that scales to meet demand and facilitate dynamic performance tuning
- Self-healing network capabilities that resolve issues before they impact users

ENHANCED SECURITY AND SIMPLIFIED COMPLIANCE

In today's threat landscape, failing to stay ahead could leave your business exposed to breaches and costly penalties.

Our NOC services put network security first. We constantly monitor activity, identify vulnerabilities, and ensure regulatory compliance. Our IT solutions elevate your infrastructure to the forefront of security innovation, protecting your organization from evolving threats.

UNDERSTANDING NETWORK EVENTS ACROSS ENVIRONMENTS

Our global support framework, built on ITIL best practices and advanced event detection systems with SLA-specific responses, keeps your infrastructure operating at a 100% uptime target. Low-cost, tier 1 support acts as an

extension of your team to perform routine activities, freeing up high-level technical skill—yours and ours—to focus on more critical support issues.

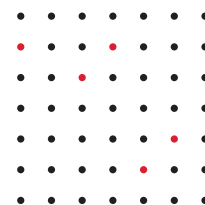

API connections for monitoring and ITSM tools allow for frictionless integration of your existing toolset into a powerful AIOps-enabled management platform.

Our approach to continuous network improvement

- Define requirements, audit tools, and build a tailored project plan.
- Deploy automations, runbooks, integrations, training, reporting, and more
- Maintain uptime with 24x7 support, change management, and maintenance
- Optimize performance through quality analysis, reporting, and business reviews.

End-to-end managed NOC support

Drive peak uptime, performance, and security with proactive network management designed for enterprise IT.

DO YOU KNOW YOUR “NINES?”

Our AIOps-enabled network solution boasts “six nines” uptime. This refers to the target percentage of uptime that a network can expect to experience in a given timeframe. So what do these stats really mean?

Let’s break down the numbers.

When your network stops moving, your business stops moving. For organizations that can't afford to slow down, AIOps-enabled networks keeps operations running.

An organization that requires their network to run 24 hours a day, 7 days a week, 365 days a year, will experience on average...

Three Nines	8.76 hours of network disruptions per year at 99.9% uptime.
Four Nines	52.56 minutes of network disruptions per year at 99.99% uptime.
Five Nines	5.26 minutes of network disruptions per year at 99.999% uptime.
Six Nines	31.5 seconds of network disruptions per year at 99.9999% uptime.
